Hangouts

 **Giyoul Kim** 15 mins
What time are we meeting for Karaoke to...

 **Hangouts Team** 11:45 AM
Carrie: Looks great! Let's do it!!

 **Ben Henning** 11:07 AM
Wow... That season finale was incredible!

 **Chloe Huang** 11:02 AM
 Lunch?

 **Jeremy Meyer** 10:13 AM
Meet me at Paddy's Pub for a beer tonight?

 **Book club** 9:45 AM
Sarah: Did you hear there's a new booksto...

 **Daniel Munro-Lynch** 
Finally!! It's Time! 

How to facetime between an android and an iphone. Best way to facetime between android and iphone. Is there an app to facetime between iphone and android. Best app to use to facetime between iphone and android.

Table of Contents Return to The Top Google Hangouts Skype Tango Viber Zoom Meetings More Android Phone News If you're not an iPhone owner, but still want to get in on the smartphone action, that's totally okay! There are plenty of great Android phones. That said, Apple's experience in mobile software gives the company the edge in a number of areas, and video chatting is one of them. FaceTime, iOS's native video app, is a solid program that has been polished to a shine, and it's quickly becoming a generic verb like Xerox. You don't video chat someone, you FaceTime them. With an Android phone, though, you can't. So, what should Android users do? That's what's great about the open marketplace of ideas that is the Google Play store. If you need an Android alternative to FaceTime, you have not one, but several, to choose from. We took the leading candidates for a test drive to compare them with each other, taking into account price, reliability, restrictions, and features. Developers are constantly improving the experience, too, so you can expect the apps in this feature to see new services and better stability the longer they're offered. While it's easy to just stick with Hangouts, there's certainly a lot to be gained from experimenting with other Android FaceTime alternatives, depending on what friends, family, and co-workers are using. We unreservedly recommend the apps on this list. For more full-featured tools for businesses, you should check out our roundup of the best video conferencing software. And pour one out for Houseparty, formerly one of the finest and most enjoyable video chat apps (Epic shut it down). See It (Opens in a new window) Google's out-of-the-box FaceTime alternative is a pretty good video-chatting and texting tool. One of the best things about it is that it's cross-platform, and linked to your Google ID. So, not only does Hangouts work great on every Android phone, you can take it to your desktop—even your Mac desktop. Hangouts replaced Google Talk as the native chat app within Gmail (and Google+, but let's not talk about that) a few years back, and the team has refined it a lot since then. Hangouts works beyond simple person-to-person connections. The platform supports multiple-person conversations for up to 10 people. Google also offers a mobile version for iOS. One advantage that Hangouts has over FaceTime is its data latency management. Apple recommends using FaceTime while connected to a wireless internet connection; Hangouts handles standard cellular data rates much better. In addition, voice calls to other Hangouts users are completely free. If you own an Android phone, you should also have a Google account—it's the key to all of the company's many services, including Hangouts. Keeping your address book in order lets you merge all of your message streams into one easy-to-follow feed. Alternatively, Google Meet is Google's more professional video conferencing app. For more, read our explainer on the differences between Google Hangouts and Google Meet. Google Hangouts (for Android) Review See It (Opens in a new window) When you think about video chat services, Skype is the gray-haired grandfather that still manages to hang on. First released in 2003, the system shared a back end with music-sharing system Kazaa (remember music-sharing systems?). It grew steadily until 2011, when it was acquired by Microsoft to replace Windows Live Messenger. Obviously, that makes it the default messaging client for Windows phones, but the Android versions are quite solid. Early versions of Skype for Android weren't well-integrated with your mobile device's address book, making adding contacts a chore. In 2014, the 5.0 update finally brought it into harmony with the Android ecosystem, letting it access your existing contents. This simple change rocketed Skype into the upper echelon of Android video chat services. Skype's video chat services work in a variety of bandwidth situations, and keeps a constant monitor of a call's quality. You are able to score the call afterwards, and depending on what hardware you are using to make the video call, the video can be transmitted in HD. Basic Skype accounts are free and give you unlimited, one-on-one video chat across any supported platform. Skype used to charge a subscription fee for multi-user video chats, but now group chats are included in the basic service. It still charges for calls to phone users outside the Skype service, either by the minute or a monthly subscription. See It (Opens in a new window) If you're looking for a full-service FaceTime alternative for Android, and you have friends willing to jump ship, check out Tango. The app debuted in 2009, and unlike the other offerings on this list, Android is Tango's primary platform. Although there are builds for iOS and Windows phones, Google's OS is its native element. That means that hardware optimization is at its peak, leading to a smoother user experience and better call quality. On a Wi-Fi device, you can interact with any of Tango's 200 million users without needing a cellular connection. The service supports voice calls, video calls, text, and image chat. Accounts are free, and the signup process is quick and painless. If you want to try and get your friends onboard with you, Tango lets you send text messages and emails to your friends to try and get them to sign up for the service. As long as everyone you want to talk to is using Tango, it's a solid all-purpose communication tool. Note that, unlike other services, Tango's video chats are strictly one-on-one affairs. Tango's developers present their app as not only as a communication tool, but as a full-fledged social network, too. That means a public profile and news feed, games, stickers, and other bells and whistles. If you're looking for something that does video calls like FaceTime, but offers a whole lot more, Tango might be your jam. See It (Opens in a new window) Viber began as a text and audio messaging app, but the dev team quickly realized that it would need to add features to compete in a crowded marketplace. First, the crew added audio chat, and then, in 2014, introduced video-chat functionality. One of Viber's best aspects is its clean and intuitive design. Whereas Skype and Hangouts seem like desktop legacy apps that awkwardly transitioned to mobile experiences, Viber was built from the ground up with your phone screen in mind. In 2013, Viber received a desktop app, but the company's clear focus is still on mobile. Viber's biggest weakness is that it has no way to communicate with users outside of its service. Unlike other platforms that utilize SMS protocol, Viber doesn't let you send messages to contacts who aren't Viber users. Hopefully, Viber fixes this issue; the service has more than 280 million users around the world, so it's not a niche product. Viber (for Android) Review Sign up for Free at Zoom Meetings Check Price (Opens in a new window) It doesn't get better than this. Zoom Meetings is our Editors' Choice pick for video conferencing tools. Our review praises its "stellar performance at a reasonable price." Anyone working from home is already probably pretty used to hopping on a Zoom call multiple times per day from their computer. Fortunately, Zoom Meeting is also available on Android, where it's known as Zoom Cloud Meetings. It's easy to use, offers a generous free account, and offers stellar performance. In addition to our exhaustive review of Zoom Meeting, we have written a handy guide to getting started with the services. Top Zoom Tips for Better Video Conferencing in a Locked-Down World. If you are just getting started with Zoom Meeting, the other thing you'll want to know is how to lock down your meetings so that you can stop people from Zoom-bombing, or filling your video conference with spam, porn, or worse. For that, you should read How to Prevent Zoom-Bombing. Zoom Meetings Review More Android Phone News Edgar Cervantes / Android Authority Looking for a way to get FaceTime for Android? Unfortunately, no such luck as Apple's popular video chatting app is only for iOS devices. One of the more difficult tasks when moving from iOS to Android is finding a replacement for the ubiquitous FaceTime. What makes it tough is that FaceTime is actually pretty good and it's so synonymous with the iOS experience that it's become a verb (FaceTiming). There are a ton of video chatting apps on Android but none of them have that level of ubiquity. Luckily, there are still some that work very well and compete on a feature-by-feature basis. Here is our list of the best alternatives to FaceTime on Android. The best alternatives to FaceTime on Android Joe Hindy / Android Authority Facebook Messenger is probably the easiest alternative to FaceTime on Android. Tons of people use Facebook and that includes most of the people you know (probably). That means that you can do video calls with people without having to use a brand new service. The app itself is functional even if it is bloated and annoying. It also works cross-platform so your iOS, Android, and computer toting friends can join the fun. We wish Facebook would work on making the app a little less horrible, though. Messenger Lite recently got video chat support. We recommend trying out the Lite version first. Google Duo is essentially FaceTime on Android. It's a simple live video chat service. By simple, we mean that it's all this app does. You open it, it ties to your phone number, and then you can get to calling people. Whoever you're calling will need to be using Duo as well. The best part of this app is that it's cross-platform. That means your iPhone friends can get on board as well. It has a few nifty features, such as Knock Knock which lets you see callers before you pick up their video chat call. It's easy, free, multi-platform, and it works really well. JioMeet is one of the newer alternatives to FaceTime and it's actually a little bit better in some cases. It doesn't just support one-on-one video chats, but sign-up chats with up to 100 people at the same time (for a maximum of 24 straight hours). The app also has a nice, simple UI along with some security features like password-protected chats and a driving mode for safety. It's somewhat newer than most options and may have a bug or two, but it worked fine in our testing. Price: Free with in-app purchases JusTalk is a surprisingly good video chatting service. It boasts decent quality video on every kind of connection except for 2G. It also gives you the option of doing things like doodling on the screen while you chat, image sharing, and there is even theming. There is also boasts cross-platform support so you can get your iOS friends in on it too. Don't let the price fool you. This app is free to use. The in-app purchases are for things like themes and other customization features. They are totally optional. It's a great alternative to FaceTime on Android. Signal Private Messenger is an excellent FaceTime alternative for privacy seekers. It features a bunch of stuff, including group chats, video calls, voice calls, and end-to-end encryption for security. The video and voice call clarity is good and it works quite simply. Telegram would be another excellent option here, but they seem to only support video messages at this time. In any case, Signal Private Messenger is free, open-source, secure, and one of the better FaceTime alternatives. However, its privacy is its biggest feature. Those that want something a little more fun may want to look elsewhere. Skype is the original FaceTime. It's also one of the best alternatives to it. On top of its truly excellent cross-platform support (that includes a native app on some Linux distros), Skype is renowned for its stability, popularity, and its many features. You can also text and voice call your Skype contacts entirely free with an option to buy minutes to call actual phone numbers. You can video with up to ten people if you want to. The only downside is that the official app is a little buggy. It always has been. However, it does work well enough to be a positive experience most of the time. It's a perfectly acceptable alternative to FaceTime on Android. Snapchat is an odd messaging app, but one of the most popular. It uses photo chatting instead of traditional text chatting. However, text chats, voice chats, and video chats (with up to 16 people) are also available in the app. It is in the process of undergoing a massive reconstruction project, so it'll be much different by the end of 2019. The app is entirely free, comes with some neat AR functionality, and the self-destructing messages are popular with most of its users. Price: Free with in-app purchases Viber is another application that's been around for a long, long time. It initially started out as a calling app but has since graduated to a messaging client and a place where you can make free video calls. The app boasts over 600 million users worldwide. That's pretty impressive. There is also a social feature that lets you check the latest happenings in the world. It even has Android Wear support. Like others, the in-app purchases are mainly for things like stickers and it's all optional. It's a solid and underrated alternative to FaceTime on Android. WhatsApp is one of the most popular messaging services out there. It's an entirely free service that allows you to text chat, voice call, and video call your friends. It's cross-platform with virtually everything so it doesn't really matter what your friends have. Additionally, you can send all kinds of stuff. The chats are encrypted which is a positive thing for the security conscious, but that doesn't mean it's not one of the best alternatives to FaceTime on Android. Zoom is not really an alternative to FaceTime, but it is a decent, cross-platform video chat app. It promotes itself as a business or education platform but anybody can use it. It supports video chats with up to 100 participants and also includes encryption, screen sharing, and all kinds of other features. For one on one conversations, you definitely want something like Google Duo or Facebook Messenger. However, those who want the ability to scale up should definitely consider this one.
