.map (toptalentdata :: getname). In this article we will cover some of the most common errors in spring, specifically oriented towards web applications and the spring boot. As an example of a ã ostil library, it will use Project Lombok annotations in examples for the rest of this article. Spring also allows the processing of asynchronous applications through the Deferredresult class. Consider the case in which you are using a memory database for local development, with an MySQL database in production. Committee #4: inconsistency and misconducting of errors The issue of consistency is not necessarily exclusive to Spring (or Java, for that matter), but it is still an important facet to consider working on spring projects. Thus, embrace the abstractions - the next time he faces a particular problem, make a bay first and determine if a library that solves that problem is already integrated into spring; Today, the possibilities are that it will find an appropriate existing solution. This, in summary, means giving up all Setter and having private final fields in all their model classes. Spring is possibly one of the most popular Java Marcos, and also a powerful beast to tame. This generally means having a gene of gené rich error and a description instead of the copied solution of one) return a message of â € œ500 internal server errorâ €, or b) simply leave the trace of the pile to the user to the user (which must be avoided at all costs since it exposes its tnenopmoC@ :odaelbac le arap ¡Ârazilitu es)nirukuk.oc(roirepus eteuqap etneiugis le euq acifingis otse ,otercnoc osac ortseun nE .gnirpS noc n³Âicanrebih ed rodadilav nu odnaelpme etnemaipmil s¡Ãm ohcum ratuceje edeup es otsE .etnerefid otamrof nu ne yrotisopeRtnelaTpoT MOR F sadibicer n³Âisrevnoc ed sedaditne sal y oirotisoper nu ed sotad odnarepucer ,ralucitrap lanif otnup nu a seduticilos sal odnaepam ¡Âtse ,rebas a ;Âuqa odnazilaer ¡Âtse rellortnoCtnelatpoT euq sasoc sanugla nos ,dadilaer nE yah euq Âlla euq yah euq rev somedop Âlla euq rev somedop ,ograbme niS .IPA ed selanif sotnup sotreic edsed elbisecca aes sotad ed sesab sal ed arutcurtse al euq odneicah natseifinam es sanretni sal "odnaL" .solih ed n³Âicaerc al arap 8 avaJ ed lanoicnuf olitse ed sotelpmoc sodnof sal y serotuceje ed soicivres sol razilitu acifingis , etrap royam us ne ,¡Ârah ol otsE .senoicatona saiporp sartseun raerc se omsim ol rargol somaÂrdop euq ne amrof artO .etnematcerroc atropmoc es ecivretnelatpoT euq ed otseupus le ojab rodalortnoc le raborp somereuq euq somagiD .otnemom odot ne sotcerroc serolaV sol ¡Âranoicroporp sotejbo sol ed sedadeiporp sal a osecca le euq y n³Âicnetnoc ed samelborp negrus on euq ed oruges ratse edeup arenam atse eD .selojirf rarepucer arap esraenacse nebed seteuqap ©Ãuq erbos atsip anu gnirpS a ad el etnemelpmis arevamirp ed n³Âicatnemucod al ne otcepser la n³Âicamrofni s¡Ãm renetbo edeup(atseupmoc n³Âicatona aL }} ;)sgrA ,ssalC.noitacilppA(nur.noitacilppAgnirpS{)sgra][gnirtS(niaM radn¡Âtse dioV ocit¡Âtse dioV ocit¡Âtse dioV dioV citatS cilbuP{ acilbºÃp esalc ed n³ÂicacilpA noitacilppAtooBgnirpS@ :Âsa omoc ,noitacilppnAtooBgnirpS@ ed senoicacilpa ed atseupmoc n³Âicatona anu noc odatona odis ah zÂar eteuqap le euqrop raelbac ebed selojirf ©Âuq ebas etroser le y etroser le rarugifnoc arap senoicatona azilitu)otnujda buHtiG ed oirotisoper us omoc Ãsa(olucÂtra etsE .)etneilc led odal le rajenam ed licÂfid res ed s¡Âmeda Myannotationvalidator) @restController (ToptalentController) @repositorry (Toptalentrepositary) @service (TottlentesSvice) If we have had any additional classes of @configuration also would be verified to know Java. Java. In case you are not very familiar with Spring Boot but would still like to try out some of the things mentioned, I¢ÂÂÂve created a GitHub repository accompanying this article. Avoid Mutability This one comes straight from functional programming and, adapted to OOP, states that class mutability and changing state should be avoided. A ¢ÂÂÂcleaner¢ÂÂÂ solution would be separating those concerns into their own classes. You would make a validator which checks for string length by creating two additional classes, one for validating and another for annotating properties: @Target({ElementType.METHOD, ElementType.FIELD, ElementType.PARAMETER}) @Retention(RetentionPolicy.RUNTIME) @Documented @Constraint(validatedBy = { MyAnnotationValidator.class }) public @interface MyAnnotation { String message() default "String length does not match expected"; Class[] groups() default {}; Class
